

To fulfill the growing market demand for ultra-high octane gasoline in the premium and sport's car segment, HPGRDC has indigenously developed an octane boosting additive formulation that can increase the Research Octane Number of BS VI Gasoline to 100. The additized gasoline was launched in September 2021, under the brand name poWer 100, the highest octane rated gasoline in India. poWer 100 additive formulation is non-metallic, environment-friendly and non-alcohol based. At the same time, it also conforms fully with requisite BS VI specifications. The addition of PoWer 100 in HPCL's product basket ensures that it continues to lead the premium fuel segment.
