

HP PurUs

An all-purpose Disinfectant Floor Cleaner

During the recent global pandemic of COVID-19, the need for maintaining a hygienic indoor and outdoor environment is once again being emphasized. Failure to decontaminate virulent strains from the commonly used surfaces can not only pose severe challenges for the ongoing containment measures but can also lead to even deadlier pandemics in future.

In view of this, HPGRDC has developed an all-purpose floor cleaner for disinfecting contaminated surfaces keeping in interests the health of HPCL personnel and public to avoid the spread of COVID-19 and other infections.

The developed floor cleaner consists of ingredients as per WHO guidelines and kills 99.9% of all virulent strains. Additionally, HP-PurUs also has improved ability to inhibit fungal growth.

Due to its unique composition, HP-PurUs is also more environment friendly compared to purely Hypochlorite based disinfectants and has a better residual disinfection ability.
